

5/1/18 - CLF re: GB

Tom Irwin, Melissa Paley
Glen, Ellen, Mel, Jackie, Regina

100% of NPS
in light of
that goal
Valenza/Reese
✓ - NPS
✓ - pt source permit
Down
✓ - delegation
N overall

options for NPS reduction
w/ skilled work - Adams?
PI, AP & good vehicles?
S-?
separates?
fertile?

Tom - don't remove N impaired segments from 303(d)

- delegation - will DES have resources?
- concern re: moving process closer to local
political pressures - so imp't to get good
permitting decisions made now

getting from A to done

Reese - look at them like it should be 3

melissa - urgency re: looking at Reese permit - big expansion, no N limit

Tom - should look at mass as well as concentration

if there's a big flow increase, even a tight concentration limit
could allow too much an increase in mass loading

Tom - opposition to permits is driven by municipal staff - not citizens (not hearing citizen concerns)
- people are voting to spend \$

melissa - MS4 won't achieve that much
(public education)

319 is a really imp't tool "unweighted assessments"
- source tracking, rain gardens, septic education, ID of failing septic systems
- berry brook work
- old ID subwatersheds with high loadings; ID champions to push for reductions

Jackie - Ohio SRF used to fund NPS projects

Tom - GW rise - old increase septic pollution - they're getting more involved in this
me - opp'ty to try cap-like approaches re: septic?

melissa - PRB's have been tested in a couple of places - not sure what the driver is

Tom - James Hole (U/H) says he can do "hot spots" analysis for dis/roo / communities
